JARVIS

Hinglish AI assistant for Indian marketplace sellers

A seller-operations platform for Indian marketplaces. Sellers and their staff ask in Hinglish, by voice or text, and it answers, works out the figures, drafts the paperwork, or queues the change: stock and price updates on Amazon, Flipkart and Meesho go through an approval queue and a browser executor driving the seller's own portal session, so no marketplace API keys are needed. Complete source and IP, offered for outright transfer.

625	route handlers across 42 router modules
9,255	backend tests passing - 81% line coverage, over a 70% floor that fails the build
2,049	regression tests in 200 files, most named for a real defect found in use
18	business and legal documents, the four agreements also in English
5	marketplaces integrated - Amazon, Flipkart, Meesho, Myntra, Shopify

Prabhudutt Mishra - Yleef Enterprise

Figures measured on 31 October 2026 at commit 1fa90e2. Each one, with the command that reproduces it: yleef.online/proof/
Pre-revenue: built and tested, not yet deployed for a paying seller.

A seller asks how to cut Amazon returns. The answer comes back in Hinglish.

Not a translation layer - the assistant reasons and replies in the language the operator actually speaks.

Every marketplace write waits for a human to approve it.

Queued action #100: a stock update on Amazon. Preview, approve or reject - nothing is written without a person.
